Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2013.

## Section 1 - Conflict Minerals Disclosure

Items 1.01 and 1.02 Conflict Minerals Disclosure and Report, Exhibit

### Conflict Minerals Disclosure

A copy of VOXX International Corporation's Conflict Minerals Report for the year ended December 31, 2013 is provided as Exhibit 1.02 hereto and is publicly available at <http://investors.voxxintl.com/sec.cfm>.

## Section 2 - Exhibits

Item 2.01 Exhibits

Exhibit 1.02 - Conflict Minerals Report as required by Items 1.01 and 1.02 of this Form.

## SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned thereunto duly authorized.

VOXX International Corporation (Registrant)

Date: May 30, 2014

BY: /s/ Patrick Lavelle  
Patrick Lavelle  
President and  
Chief Executive Officer

**VOXX International Corporation**  
**Conflict Minerals Report**  
**For The Year Ended December 31, 2013**

This is the Conflict Minerals Report of VOXX International Corporation (herein referred to as “VOXX,” the “Company,” “we,” “us,” or “our”) for calendar year 2013 in accordance with Rule 13p-1 (the “Rule”) under the Securities Exchange Act of 1934 (the “1934 Act”), as amended. Please refer to Rule 13p-1, Form SD and the 1934 Act Release No. 34-67716 for definitions to the terms used in this Report, unless otherwise defined herein.

The Rule was adopted by the Securities and Exchange Commission (“SEC”) to implement reporting and disclosure requirements related to conflict minerals as directed by the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (Dodd-Frank Act). The Rule imposes certain reporting obligations on SEC registrants whose manufactured products contain conflict minerals that are necessary to the functionality or production of their products. Conflict Minerals are defined as cassiterite, columbite-tantalite, gold, wolframite, and their derivatives, which are limited to tin, tantalum, tungsten, and gold (3TG) for the purposes of this assessment. These requirements apply to registrants whatever the geographic origin of the conflict minerals and whether or not they fund armed conflict.

If a registrant can establish that the conflict minerals originated from sources other than the Democratic Republic of the Congo or an adjoining country (the “Covered Countries”), or from recycled and scrap sources, they must submit a Form SD which describes the Reasonable Country of Origin Inquiry completed.

If a registrant has reason to believe that any of the conflict minerals in their supply chain may have originated in the Covered Countries, or if they are unable to determine the country of origin of those conflict minerals, then the issuer must exercise due diligence on the conflict minerals’ source and chain of custody. The registrant must annually submit a report, Conflict Minerals Report (CMR), to the SEC that includes a description of those due diligence measures.

The report presented herein is not audited in accordance with the transition provision of the Rule.

### **Company Overview**

Voxx is a leading international manufacturer and distributor in the Automotive, Premium Audio and Consumer Accessories industries. Our principle products include rear-seat entertainment devices, satellite radio products, automotive security, remote start systems, digital TV tuners, mobile antennas, mobile multimedia devices, aftermarket/OE-styled radios, car-link smartphone telematics application, collision avoidance systems, location-based services, home theater systems, high-end loudspeakers, outdoor speakers, iPod/computer speakers, business music systems, cinema speakers, flat panel speakers, bluetooth speakers, soundbars, headphones, DLNA (Digital Living Network Alliance), remote controls, rechargeable battery packs, wireless and bluetooth speakers, personal sound amplifiers, and iPod docks/iPod sound, A/V connectivity, portable/home charging, reception and digital consumer products. We conducted an analysis of our products and found that tin, tantalum, tungsten and gold (3TG) are found in substantially all of our products.

In accordance with the Rule, VOXX undertook due diligence to determine the conflict minerals status of the necessary conflict minerals used in its automotive, audio and consumer electronics manufacturing and distribution business. We adopted a due diligence program that is consistent in all material respects with the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas: Second Edition (OECD 2013) (“OECD Framework”), an internationally recognized due diligence framework, including related Supplements for each of the conflict minerals.

VOXX has determined in good faith that for calendar year 2013, its conflict minerals status resulting from its due diligence efforts for all products shows to be “DRC Conflict Undeterminable” (term as defined in the 1934 Act).

### **Conflict Minerals Policy**

Voxx has instituted a DRC Conflict Minerals sourcing policy setting forth that the Company does not knowingly source metals that come from the Eastern provinces of the Democratic Republic of Congo (the “Conflict Region”). Voxx’s goal is to ultimately be able to certify that all of its products are manufactured with conflict free minerals. Voxx’s Conflict Minerals Policy statement can be found here: <http://www.voxxintl.com/sustainability/suppliers/>

All employees who are members of the Company’s Conflict Minerals Process Organization (as defined in section 1 of the Due Diligence portion of the report) are required to review the Company’s policy on conflict minerals and the relevant due diligence process. The Process Administrator and Process Champions (as defined in the Internal Standard Operating Procedures section) are responsible for ensuring that the related materials are appropriately communicated to organization members and key employees involved in the Company’s supply chain management.

Suppliers are encouraged to support industry efforts to enhance traceability and responsible practices in global mineral supply chains. The Company will provide consultation and reference materials to all suppliers, as requested, to aid them in understanding our conflict mineral process and due diligence plan and in developing their own policies toward preventing the use of conflict minerals or derivative metals sourced from mines controlled by armed groups in the Conflict Region.

### **Supply Chain**

Many of the products that we manufacture are highly complex, often containing thousands of parts from many direct suppliers. We have relationships with a vast network of suppliers throughout the world and there are generally multiple tiers between the 3TG mines and our direct suppliers. Therefore, we must rely on our direct suppliers to work with their upstream suppliers in order that they may provide us with accurate information about the origin of 3TG in the components we purchase.

Because of the complexity and size of our supply chain, we developed a risk-based approach that focused on all of our suppliers. We initially targeted our largest selling products, and then focused on all products sourced from these suppliers, regardless of size.

We requested that all identified suppliers provide information to us regarding 3TG and smelters using the template developed by the Electronic Industry Citizenship Coalition® (EICC®) and The Global e-Sustainability Initiative (GeSI), known as the EICC-GeSI Conflict Minerals Reporting Template (the “Template”). The Template was developed to facilitate disclosure and communication of information regarding smelters and refiners that provide material to a manufacturer’s supply chain. It includes questions

regarding a direct supplier's conflict-free policy, its due diligence process, and information about its supply chain such as the names and locations of smelters and refiners as well as the origin of 3TG used by those facilities.

### **Efforts to Determine Mine or Location of Origin**

We have requested our suppliers to complete the Template in order to determine the mines or locations of origin of 3TG in our supply chain. Additionally, we requested that suppliers provide us with smelter ID's and documentation of smelter certifications, as applicable, related to the smelters they source from. We have used the data collected to compare to a validated smelter list to help us decide how we wish to conduct business with these suppliers going forward.

### **Due Diligence**

#### **1. Internal Standard Operating Procedures**

Voxx has created internal standard operating procedures (SOPs) for its Conflict Minerals Process Organization, which was established by the Company to lead the Company's conflict minerals evaluation and due diligence process.

These SOPs provide a step by step process that each business unit, department and employee must follow in order to generate and maintain the necessary information needed for Voxx's compliance with the Rule.

The Organization is structured to provide Company-wide involvement of key individuals who have an impact on product development, procurement, production, supplier evaluation, public relations, corporate and social responsibility, information technology, legal and reporting. The members of the Organization are responsible for ensuring that the Company's due diligence process is properly executed and all issues identified during implementation or ongoing execution are appropriately addressed and resolved on a timely basis. The Organization includes:

- **Process Oversight** – VOXX International Corporation's Board of Directors
- **Process Sponsor** – Voxx's President and Chief Executive Officer, who sets the tone at the top and emphasizes the importance of maintaining compliance with the Company's established Conflict Minerals policy and due diligence process and improving supply chain management related to potential conflict minerals sources.
- **Process Leader** – Voxx's Senior Vice President and Chief Accounting Officer, who develops and oversees the Conflict Minerals due diligence process, ensures compliance with due diligence objectives and oversees day to day coordination of efforts pertaining to the due diligence process between management, external advisors and auditors.
- **Process Administrator** – Responsible for administering and documenting day to day activities of the Conflict Minerals due diligence process, and coordinating efforts between management, external advisors and auditors. This role is performed by one of the Company's administrative assistants.
- **External Conflict Minerals Advisor** – 3E Company
- **Conflict Minerals Steering Committee** – Representing a cross-section of the Company's organizational leadership, responsible for sustaining and driving the Conflict Minerals due diligence process, making decisions and ensuring the evaluation process proceeds efficiently and effectively. The members of this committee include the Company's Senior Vice President

and Chief Accounting Officer, General Counsel, Chief Marketing Officer, as well identified leads within the Company's subsidiaries at which the majority of products and materials containing conflict minerals reside, generally members of the engineering department.

- **Corporate Compliance Team** – Responsible for the monitoring of the control environment related to and management of the external reporting process. Members of this team include the Director of Corporate Compliance and Manager of Financial Reporting who are responsible for the Company's SOX compliance and the filing of SEC reports.
- **Conflict Minerals Champions** – Designated individuals at each of the Company's subsidiaries responsible for monitoring the functions in their respective processes, communicating with the Conflict Minerals Steering Committee about issues and changes within their processes and communicating with local personnel on new developments or requirements of the Conflict Minerals evaluation.
- **Significant Subsidiaries and Process Owners** – Significant operating groups (and their respective owners/group leaders) identified by Company management that source or manufacture products containing minerals included on the Conflict Minerals list and requiring evaluation.

The Conflict Mineral Steering Committee, Corporate Compliance Team and Conflict Mineral Champions are responsible for assisting the process owners in the development, documentation and implementation of the Company's procedures and the evaluation of potential conflict minerals procurement for its supply chain. All internal resources performing and/or assisting in the Conflict Minerals evaluation and due diligence are qualified to perform his/her respective duties in the evaluation and are trained on the systems used to carry out the Company's due diligence.

## 2. Risk Assessment & Risk Mitigation

The Company strives to maintain positive long-term relationships with all of its suppliers while remaining cost competitive in the market and upholding established quality standards. Whenever possible, the Company will leverage its long-term relationships to influence its suppliers to support conflict minerals initiatives and enable the Company to continue to responsibly source from them. As part of Voxx's Compliance Plan design, all products and suppliers were assessed and flagged in a Supplier Database for prioritization of due diligence and supply chain sourcing activities.

The Company's consultants, 3E Company, has created and maintains for Voxx a supplier database to facilitate supply chain inquiries and control the documentation of due diligence performed related to potential conflict minerals within its supply chain. The supplier database is maintained within a software tool, Supply Chain Solutions, provided to the Company by 3E Company. 3E ensures the security of supplier information and that responsible process owners have been granted access to enter and maintain products and suppliers within the database and execute supplier inquiries.

At least semiannually, the Conflict Mineral Process Leader (as defined in the Internal Standard Operating Procedures section) will generate a report of suppliers contained within the Supplier Database, including an indication of whether the supplier's status is "Conflict Free." A summary of suppliers by operating group will be evaluated to determine the future risk mitigation plans for the supplier, as necessary. Each operating group is required to respond on the conflict minerals status of its suppliers.

The Company's goal is to report on all of its conflict mineral related suppliers each year. In order to achieve this goal, the suppliers of each item on the active item lists provided by the operating

groups are identified. After the initial assessment is complete, suppliers providing conflict mineral related items are clearly identified in the Supplier Database, with consideration given to the volume of conflict minerals the supplier uses within the items it supplies via high, medium and low classifications relative to the items in the operating group's supply chain. The Company focuses its due diligence efforts on those suppliers in the top two tiers to provide the greatest chance of success and coverage from its due diligence efforts.

The Company identifies the smelters/refiners of metals in its supply chain, including the mineral smelters/refiners who produce the refined metals and the gold refiners who produce the refined gold used in our supply chain through various means. This includes confidential communication with the Company's immediate suppliers, specifying to direct suppliers which smelters/refiners meet the requirements of industry accepted standards for responsible mineral handling and transport, and the use of confidential information-sharing systems on suppliers and/or the contribution to or research of industry wide schemes that provide disclosures on upstream actors in the supply chain.

Once smelters/refiners who produce refined conflict minerals used in the Company's supply chain have been identified, the Company communicates with its suppliers sourcing from those smelters/refiners and obtains from them initial information on country of mineral origin, transit and transportation routes used between the mines and the smelters/refiners, or communicates preliminary red flag evidence identified in their supply chains. The determination of whether suppliers have, or reasonably should have, identified red flags in their supply chains is based on reasonable and good faith efforts of the Company relying on the evidence generated through interactions, transactions and inquiries of the suppliers. If the Company can reasonably determine that red flags do not arise in a supplier's supply chain, no additional due diligence is required for that supply chain.

### **3. Reasonable Country of Origin Methodology**

Voxx utilizes 3E's Conflict Minerals software and services to conduct its reasonable country of origin inquiry. This has involved sending the EICC-GESI Conflict Minerals Reporting template to all of Voxx's direct suppliers. The Template must be completed and signed by an appropriate supplier signatory. Prior to administering the Template to our suppliers in scope, the Company's engineers reached out to suppliers in order to inform them of the requirements and timeline of the Rule and to provide advanced information related to the Template that would be forthcoming. In addition, 3E Company sent introductory letters to each of our in-scope suppliers to provide additional information about the Template that would be sent. Voxx also offered to its suppliers online training sessions, through 3E, in multiple languages, in order to assist them in their understanding and timely completion of the Template and to educate them regarding the relevant, emerging SEC requirements and Voxx's due diligence expectations.

All responses are received and validated for the following:

- Completeness of survey— Responses should contain all required data in the format corresponding to the survey. If responses are incomplete or inconsistent, the supplier is contacted and asked for missing or supplemental data.
- Accuracy and completeness of data – The metal content information provided should be compared to the Company's records for the supplier in order to ensure it supports the supplier's disclosure.
- Material content – The data submitted should be consistent with any internal or external sources of data, such as part of material specifications.

- Confirmation of smelter claims – Smelter information provided is compared to industry data published on the internet, the EICC/GeSI Conflict Free Smelter (CFS) list, or other recognized smelter certification program lists.
- Comparison of number of smelters reported to the size of the supplier – Larger suppliers are likely to source minerals from more smelters, as compared to a smaller supplier. At least one smelter should be identified for each metal contained in a product.

In addition to the administration and review of responses to the Template, members of the Company’s Conflict Minerals Process Organization traveled to the annual Consumer Electronics Show in Las Vegas, Nevada in January, 2014, in order to conduct in-person meetings with several of its top suppliers, in order to discuss the Company’s conflict mineral initiatives and provide additional information and answer inquiries related to the Template that was administered. These meetings were arranged by Voxx’s engineers through their ongoing communication with the suppliers during the due diligence process. These meetings will be conducted annually going forward as the Company believes the ability to meet with suppliers in person improves the due diligence process.

The Company will continue to refer to industry-driven programs to verify the performance of joint on-site spot checks of the smelters/refiners.

#### **4. Maintenance of Receivable Business Records**

Voxx uses 3E Company’s database in order to maintain business records. This includes supplier responses, supplier corrective actions and risk mitigation processes. A report will be generated from 3E’s database, at least annually, outlining the information gathered and the actual and potential risks identified in the supply chain risk assessment. The report includes the suppliers currently providing conflict minerals and the metals contained; items and related suppliers with one or more red flags; suppliers with insufficient responses; suppliers with anomalies in the due diligence process that need resolution; and suppliers who fail to respond.

Although no longer part of the mandatory requirements under final rules, the storage of these metrics is an important part of demonstrating transparency and is in accordance with compliance to recommended OECD due diligence. The Supplier Database will be maintained for a minimum of five (5) years.

This will also allow Voxx to show the long-term evolution and improvement of its program to its shareholders.

#### **5. Results of VOXX International Corporation’s Reasonable Country of Origin Inquiry**

Our evaluation encompassed 100% of the materials we purchased in 2013 from third parties. For the purpose of the Reasonable Country of Origin Inquiry, Voxx continued to receive supply chain responses through May 15, 2014. Based on the process described above, Voxx received the following results from its Reasonable Country of Origin Inquiry:

##### Initial Assessment and Survey

**Total suppliers in scope of Conflict Minerals requirements: 592**

**Response rate: 50%**

##### Supplier Responses

**No Conflict Minerals in materials provided to Voxx Corp:** 2,060 products  
**Conflict Minerals do not originate from DRC or adjoining countries:** 3,834 products  
**Conflict Minerals source is unknown:** 1,045 products

Provided below is a link to Voxx's internet disclosure of this Conflict Minerals Report: <http://investors.voxxintl.com/sec.cfm>

Through Supply Chain Solutions, Voxx created and maintained a database of this information, with the assistance of 3E. A copy of the declared sources of material has been included as part of this filing in Exhibit A. The declared sources represent a summary of all available information, which has been declared by our suppliers in response to the RCOI.

**6. Future steps to be taken to improve due diligence and risk mitigation**

We intend to take the following steps to improve the due diligence conducted to further mitigate the risk that the conflict minerals in our products finance or benefit armed groups in the DRC:

- Include a conflict minerals flow down clause in new or renewed supplier contracts.
- Engage with suppliers and direct them to information and training resources to attempt to increase the response rate and improve the content of the supplier survey responses.
- Work through the CFSI to expand the smelters and refiners participating in the Conflict Free Smelter Program.
- Engage any suppliers, if found to be providing us with components or materials containing conflict minerals from sources that support conflict in the DRC, to establish an alternative source of conflict minerals that does not support such conflict.
- Work with the OECD and relevant trade associations to define and improve best practices and encourage responsible sourcing of conflict minerals.
